# FIWARE DSCaaS goals = ADOPTION

- Make Data Spaces understandable and affordable **for SMEs and territories**  
(for people that are NOT DS expert)
- **Empower the FIWARE iHubs network** with tools and methodology to support the adoption of the FIWARE DSC by a wide range of stakeholders (especially SMEs) to enter the data economy
- Offer Data Spaces Connector “as a service” capabilities in the context of **“TEST BEFORE INVEST” approach** (DIH activities)

# FIWARE DSCaaS deployment = COLLABORATION

- In the continuity of the **involvement of front runners DIHs** and FIWARE Foundation in the EU.H2020 project i4Trust.
- Creation of a **FIWARE iHubs cluster** managing a common effort and a common budget through a collaborative governance.
- Connections with hubs from the **DSBA network** : Gaia-X, BDVA, IDSA

iHubs | Cluster

# The DSCaaS cluster

5 DIHs used to support SMEs and Territories in their digital transition

Strong concrete experience in Data Space thanks to participation in i4Trust.

## Engage

DIHs, SMEs & SSCC

## Train

Online material

## Use

Test before invest

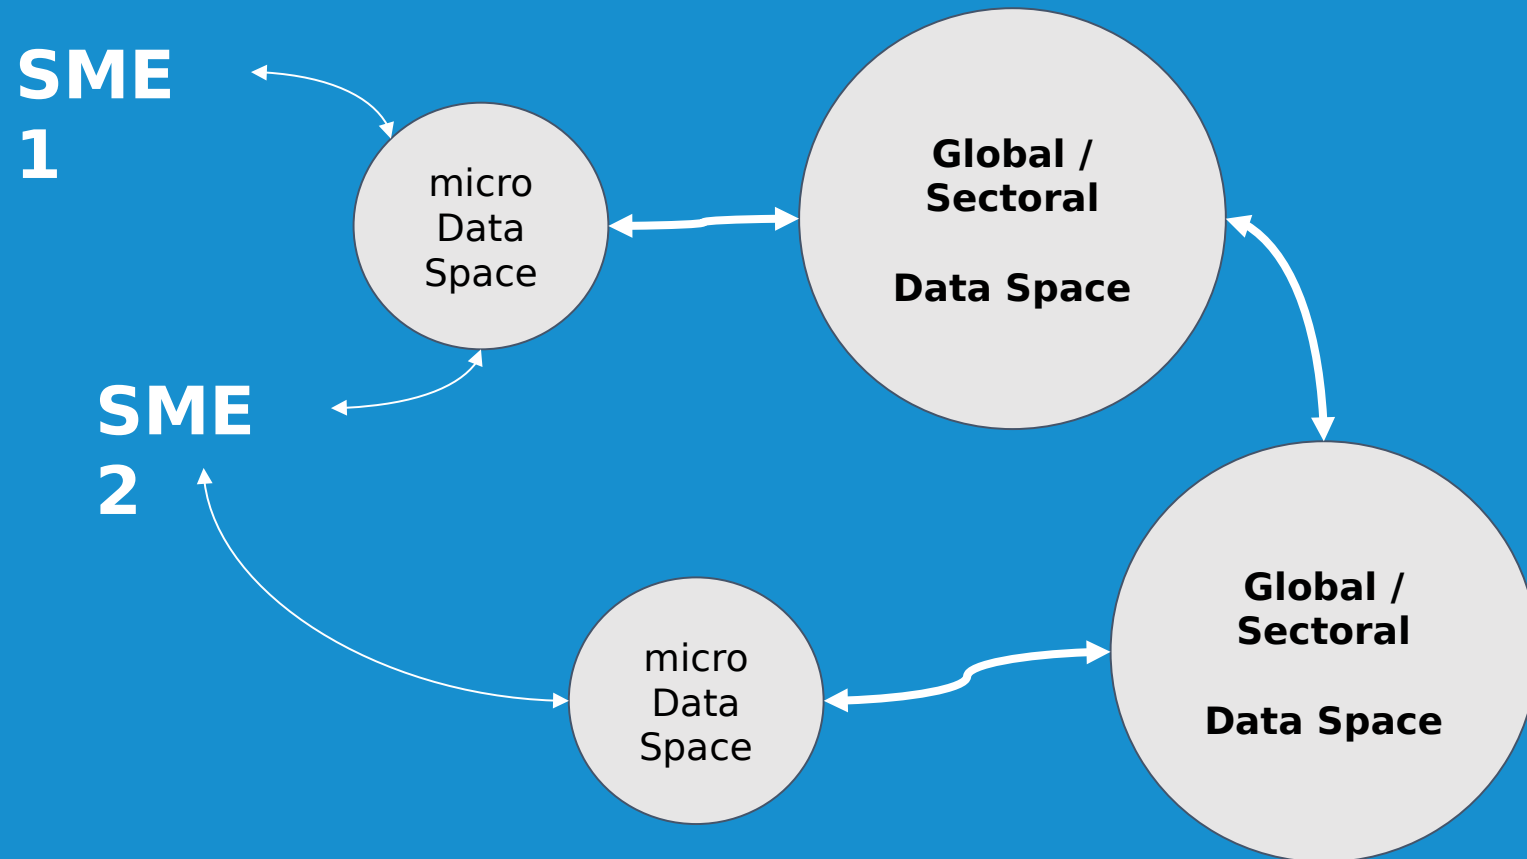

## Improve

The features

# The DSCaaS , a BOTTOM UP approach

With the perspective of an SME acting as data service provider or consumer

# The DSCaaS Methodology

## ENTER THE DATA ECONOMY

1

Define harmonized  
DATA MODELS

2

Create (real)  
DATA SAMPLES

3

Define the  
DATA SERVICES

4

Distribute  
DATA OFFERINGS

5

Control  
DATA USAGE

## INNOVATE IN THE DATA ECONOMY

6

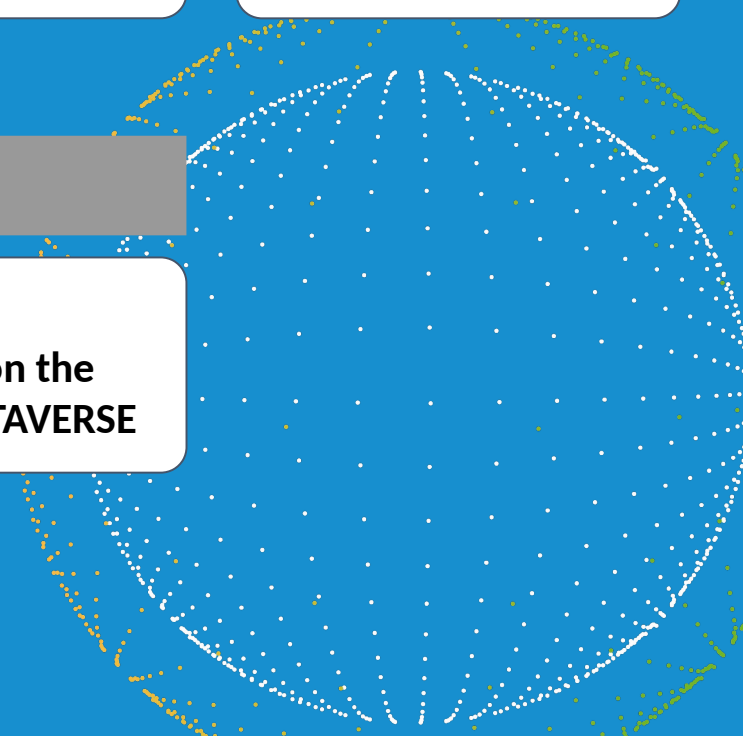

Leverage the  
(BIG) DATA TREATMENT

7

Structure  
DIGITAL TWINS

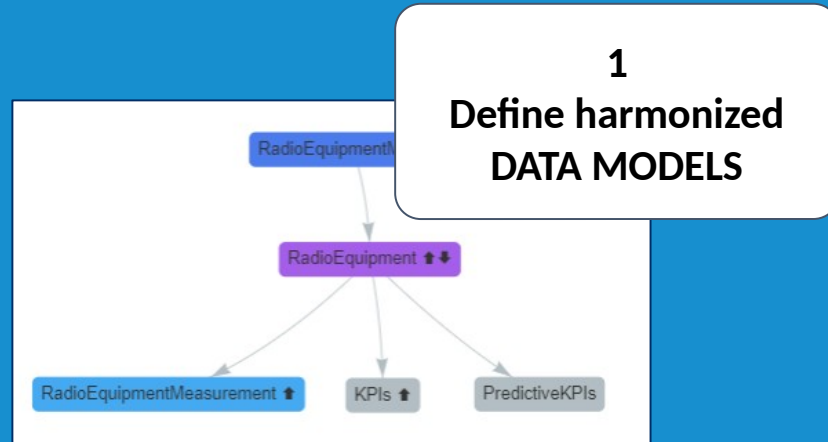

8

Interact on the  
AR/VR/METaverse

# The DSCaaS tools: integrated in ouranos-ws

Powered by  

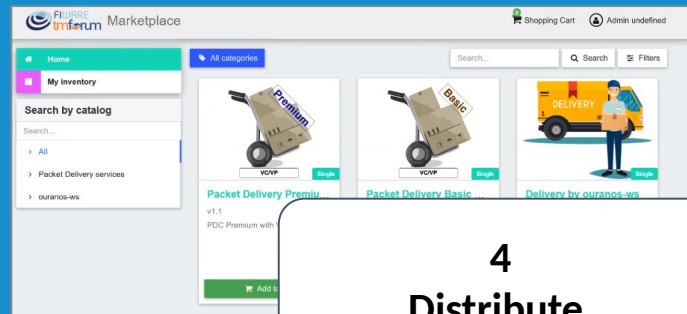

Data services

TYPE	ACTIONS	PROPERTIES
RadioEquipment	GET	description, location, name, refDeviceModel, deviceId
KPIs	GET	availability, endDate, mtbf, refDevice
RadioEquipmentMeasurement	PATCH	psuTemperature, fwdPower, paTemperature, temperature
RadioEquipmentMeasurement	POST:Notification	psuTemperature, fwdPower, isPttOn, paTemperature, refDevice, temperature
RadioEquipmentModel	GET	

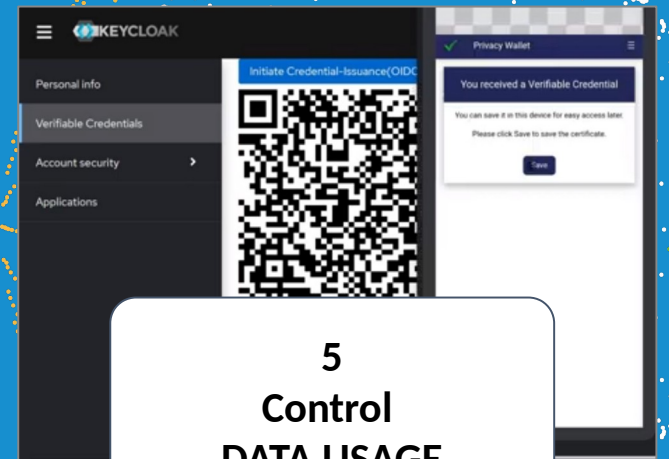

**3 Define the DATA SERVICES**

NAME	VALUE
description	This is a radio equipment for testing purposes
location	Point
name	Dev Radio Equipment
refDeviceModel	urn:ngsi-ld:RadioEquipmentModel:1:c0dd50-7dfd-417e-a4c4-1e0820c6516e
assignedFrequency	155
customer	Test Customer
deviceId	abc123
locationName	Madrid
redundancyConfiguration	1+1
redundancyFunction	✓
site	Control Tower
siteFacility	Some Facility

**2 Create (real) DATA SAMPLES**

**4 Distribute DATA OFFERINGS**

**5 Control DATA USAGE**

Existing / Legacy systems, IoT, ...

# The DSCaaS in action: use case 1

*Spare*

*P*

Data sharing as enabler of the  
circular economy within the  
automotive ecosystem

# SME 1 : Composite Car Parts Manufacturer

## Business challenges:

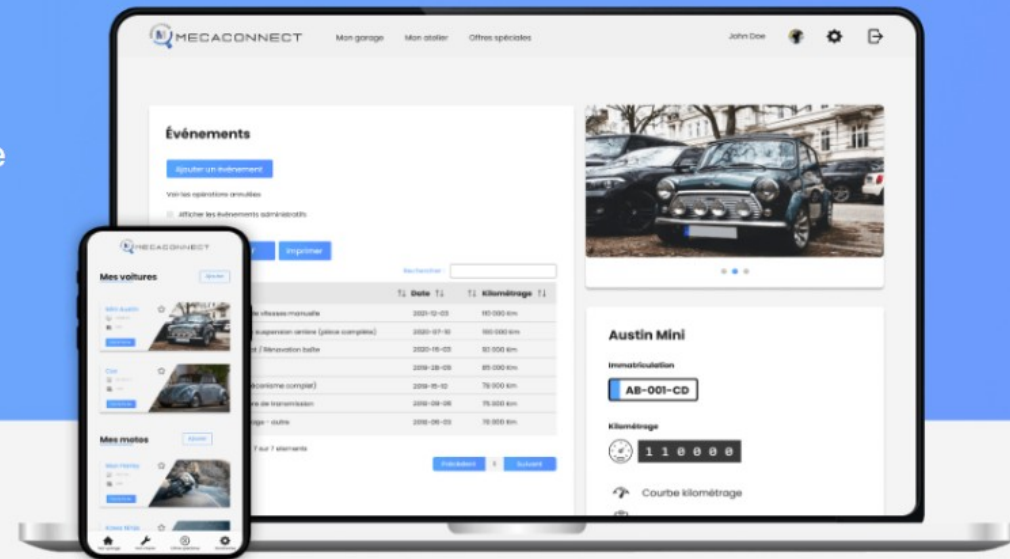

- Anticipate and automate the damaged spare parts diagnostic to make decision on repair operations
- In order to optimize the cost and the value of the repaired parts
- Individual tracking of the high added value parts

# SME 2: Digital Service Provider

## MECACONNECT YOUR DAILY ASSISTANT

Record the life of your property, create your maintenance alerts, keep your evidence and share your information securely.

## Business challenges:

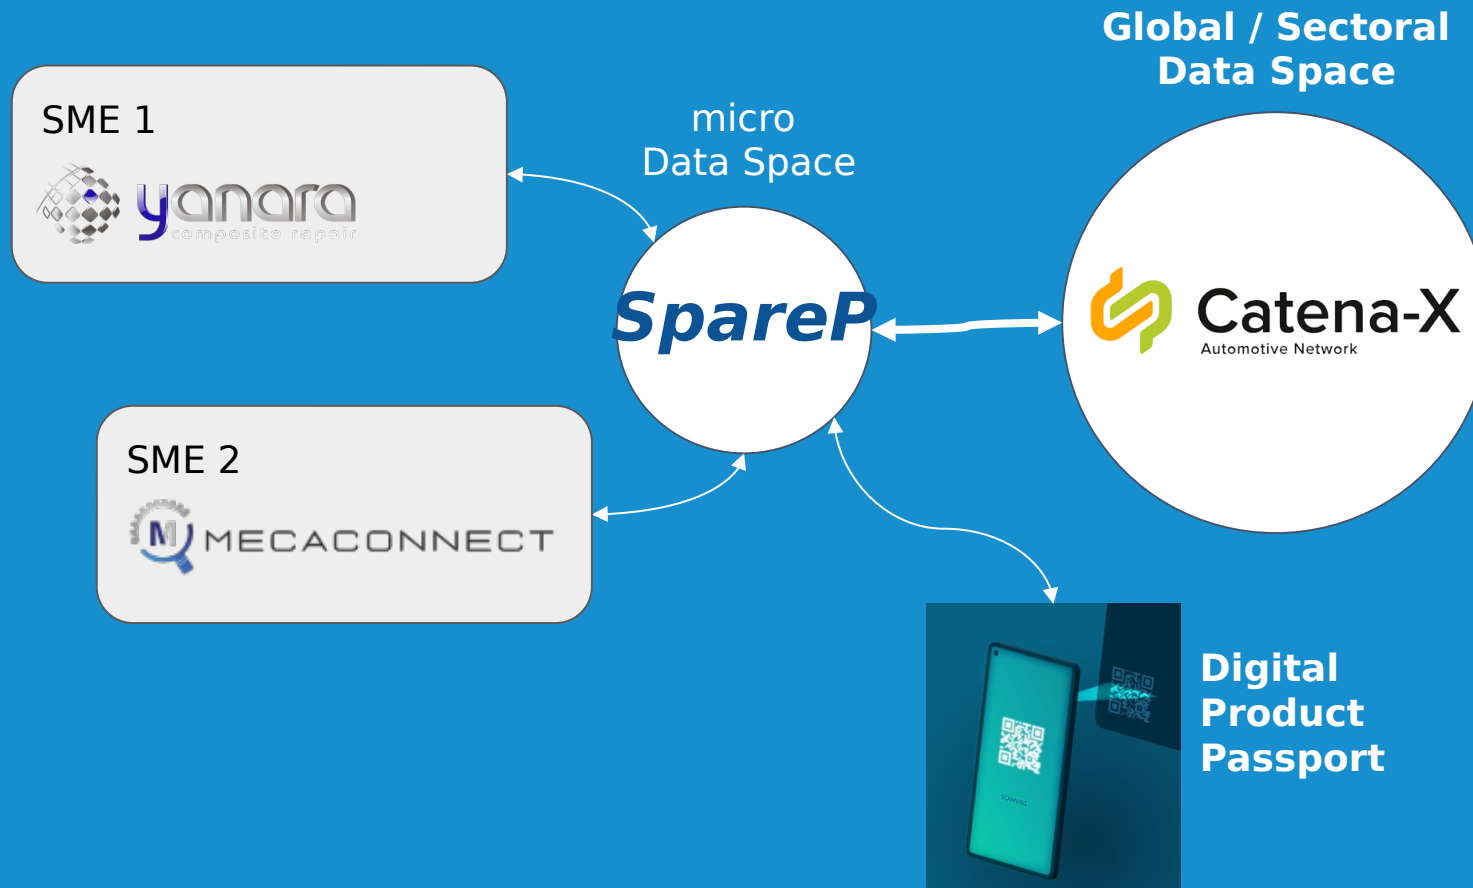

- Extend the services from vehicle to components and spare parts levels
- In order to support spare parts re-use verification & trading
- Flexibilize data collection, data sharing and data ownership transfer

# Business scenario

After a minor crash, the front clamshell of my car must be repaired.  
Thanks to SpareP Trusted Ecosystem,  
I'm going to use my Mecaconnect app to ask for - and get - the expected  
spare part,  
remanufactured by **Yanara**

# Act local, think global

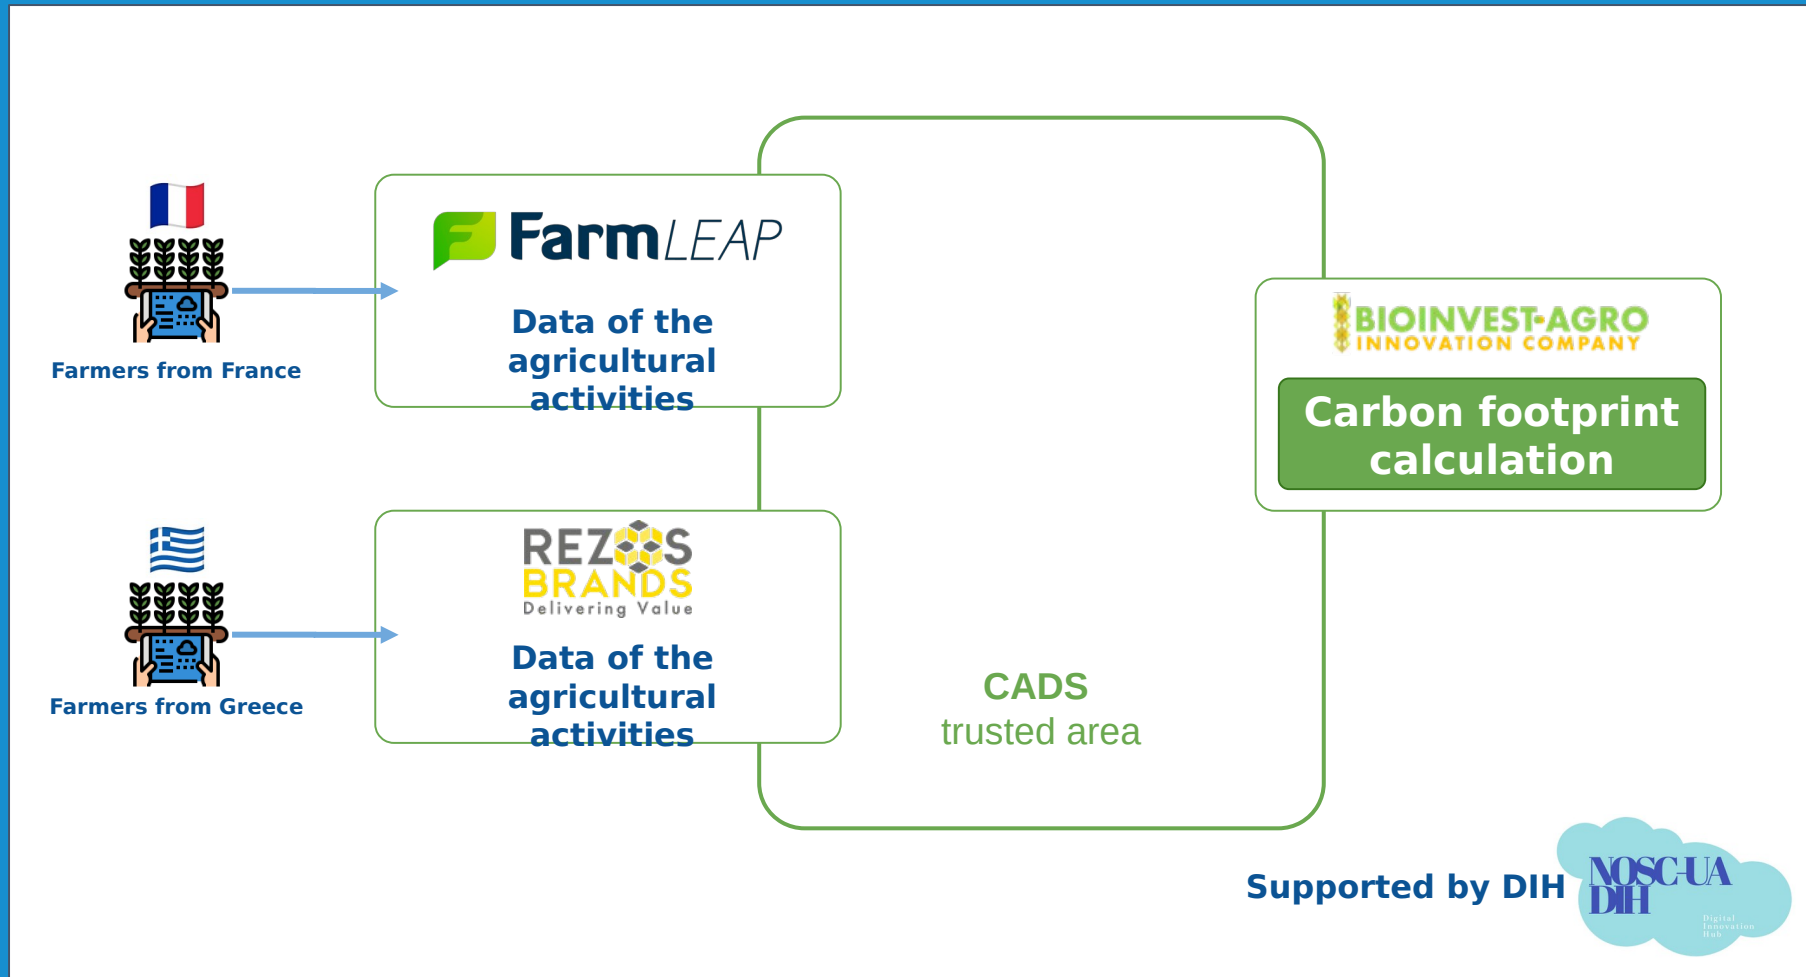

# The DSCaaS in action: use case 2

## CADS

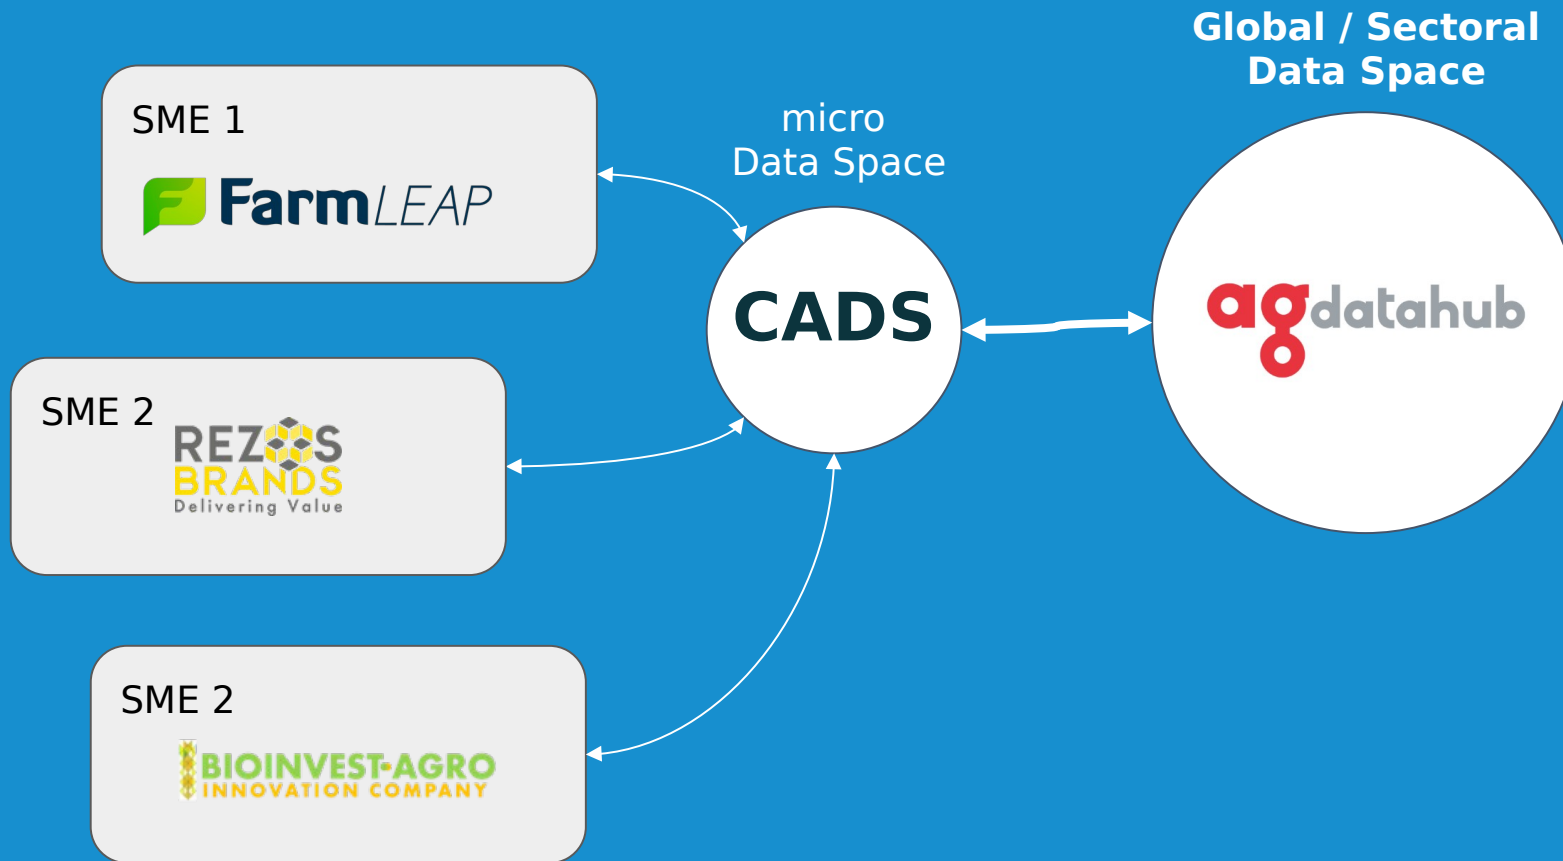

Carbon Agri Data Space

# Business scenario

# Act local, think global

# SMEs, Territories, DIH: JOIN DSCaaS !
