Are you a builder or a buyer?

AWS for data spaces

Trusted infrastructure provider

Provider of prescriptive guidance

AWS Partner Network

Supplier of advanced analytics and AI/ML services

Integrator of connectors with AWS services

SFC Data Exchange for Logistics

The challenge

The logistics sector is facing significant challenges in decarbonization efforts due to a lack of data sharing between shippers and suppliers. SFC has a strong community, but competitors fear losing competitive advantage.

The solution

APN Partner Think-It built a PoC of a SFC Data Space utilizing the EDC Connector for sovereign and secure exchange of data between participants. Leveraging the EDC in a centralized AWS architecture for quick and efficient deployment through APIs following industry standards of data models.

Why it matters

Proving the feasibility of sovereign data sharing unlocks calculating Scope 3 Emissions (80%) between global competitors, revolutionizes emissions data exchange in the logistics industry and pushes towards a more sustainable future.

MARCH 2024

Exchanging data through data spaces for environmental impact and beyond
