# The Importance of Data Monetisation

# Important of Data in the European Economy

## Indicator 5: Value of the Data Economy

The Data Economy measures the overall impacts of the data market on the economy as a whole.

2023

## Indicator 5: Value of the Data Economy

The indicator captures the potential gap between demand and supply of data skills in Europe.

2030 Baseline Scenario

## Indicator 5: Value of the Data Economy

The indicator captures the potential gap between demand and supply of data skills in Europe.

2030 High-Growth Scenario

## Indicator 5: Value of the Data Economy

The indicator captures the potential gap between demand and supply of data skills in Europe.

2030 Challenge Scenario

# Agriculture Fisheries and Forestry

# Comparison

= 1,6 %  
+ 5,2 %

= 5,8 %  
to 6.5%

# Planned financial allocations under the CAP Strategic Plans 2023-27 (in EUR billion)

# €386.6 Billion

# Harvesting Data

**Luis Daniel Ibáñez** University of Southampton

## UPCAST

Aims to enhance data sharing with plugins that automate agreements across European data spaces, prioritizing interoperability and privacy.

## Technologies

Automated data sharing and processing agreements, dynamic pricing, and data discovery within European Data Spaces. These technologies are geared towards ensuring privacy, facilitating ethical data use, and promoting environmental sustainability in the digital economy

# Harvesting Data

**Antonio Sottosanti Sr Manager GFT Group**

## FAME

develops a federated data marketplace for finance, focusing on secure, efficient data trading that aligns with European values.

## Technologies

federated data marketplace for secure data trading. Interoperability ensuring transparency in data exchange adhering to European values, supporting the integration of diverse data standards, to overcome the limitations of centralized data marketplaces and foster a trusted environment for data exchange.

# Harvesting Data

## Liliana Beltran Innovation Management - ITI

### **datamite**

Enhances data monetization and sharing through an open-source framework, aiming to boost European companies' roles in the data economy

### **Technologies**

An open-source framework designed to enhance data monetization, interoperability, and the trading and exchange of data. It focuses on providing modular software components, along with training and business materials to support European companies

# Harvesting Data

# PISTIS

**Mihnea Tufis** Res. AI / Data & Machine Learning  
Eurecat - Technology Centre of Catalonia

## PISTIS

Creates a platform for secure data trading, using advanced technologies to ensure trusted data exchanges and improve asset management.

## Technologies

secure, trusted, and controlled data sharing and trading. It integrates federated data discovery, Distributed Ledger Technologies (DLTs), Data Non-Fungible Tokens (NFTs), and AI-driven data assessments to facilitate trust and transparency in data exchanges.

# Harvesting Data

**Sebastian Schmidt** CEO at metaphacts

**GraphMassivizer** focuses on processing large-scale graph data sustainably, offering tools for high-performance analysis and environmental sustainability

**Technologies** scalable, high-performance processing of massive graph data including open-source software tools and datasets for handling extreme volumes of graph-based information, emphasizing sustainability, performance, intelligence, and usability

# Harvesting Data

# enRichMyData

**Fernando Perales (Ph.D., MBA)**  
**Head of Research JOT**

**enRichMyData** aims to improve Big Data and AI through data enrichment pipelines, facilitating the creation of high-quality datasets for better analytics.

**Technologies** Tools and methodologies for improving data quality, such as accuracy, completeness, and reliability, through an open software toolbox designed to facilitate data processing and management tasks.

# Data Farmers

## UPCAST

Aims to enhance data sharing with plugins that automate agreements across European data spaces, prioritizing interoperability and privacy.

## DATAMITE

enhances data monetization and sharing through an open-source framework, aiming to boost European companies' roles in the data economy.

## PISTIS

creates a platform for secure data trading, using advanced technologies to ensure trusted data exchanges and improve asset management.

## FAME

develops a federated data marketplace for finance, focusing on secure, efficient data trading that aligns with European values.

**GraphMassivizer** focuses on processing large-scale graph data sustainably, offering tools for high-performance analysis and environmental sustainability.
