European Cancer Imaging Initiative – where are we?

Accelerating the development of AI-based cancer imaging and management solutions, empowering scientific and innovative breakthroughs that will shape the future of patients with cancer.

9 cancer types

breast, colon, lung, prostate, rectum, liver, glioma, neuroblastoma, DIPG

1 Central Hub in Operation for Research & Innovation

2,500 Hyperontology terms extending the Health DCAT-AP scheme.

EUCAIM Deployment production & development

3 Federation processing demonstrators released

57 public datasets catalogue Tier1 (42,000 subjects, 300,000 image series)

27,000 Tier2 studies within the federated search service.

86 registered users with Access Rights to the services. Participation Rules released.

3 levels of compliance as Participation Rules using EUCAIM's mCODE data model.

8 Central Core Services: registry, federated search, access negotiation, helpdesk, training, monitoring, LS-AAI, dashboard

2 Reference Nodes as Central storage with SPE (480 cores, 15 GPUs)

50 dockerized AI tools within the experimentation platform

EUCAIM project space set at OpenEBench

Available at cancerimage.eu

European Cancer Imaging Initiative – value creation

- **Hybrid Model** - data maintained locally or federated, enhancing ethical standards and privacy
- **Large Partners network engagement**
- **Centralized Access** via single point for data search, processing, and analysis, accelerating workflows
- **Capacity Building** enabling storage of valuable data, and/or access advanced data processing and analysis tools
- **Data Interoperability** enhancing data usability across different common data models and ontology
- **Compliance and Certification** adhering to legislative and ethical standards
- **Benchmarking and validating tools** facilitating the creation of a critical mass for evidence-based medicine
- **Trust and Transparency** strategies ensuring reliability, performance, and safety
- **Support for Regulatory Bodies**, providing certified licensed datasets and tools.

EUCAIM and Medical Devices complying with MDR and AI Act

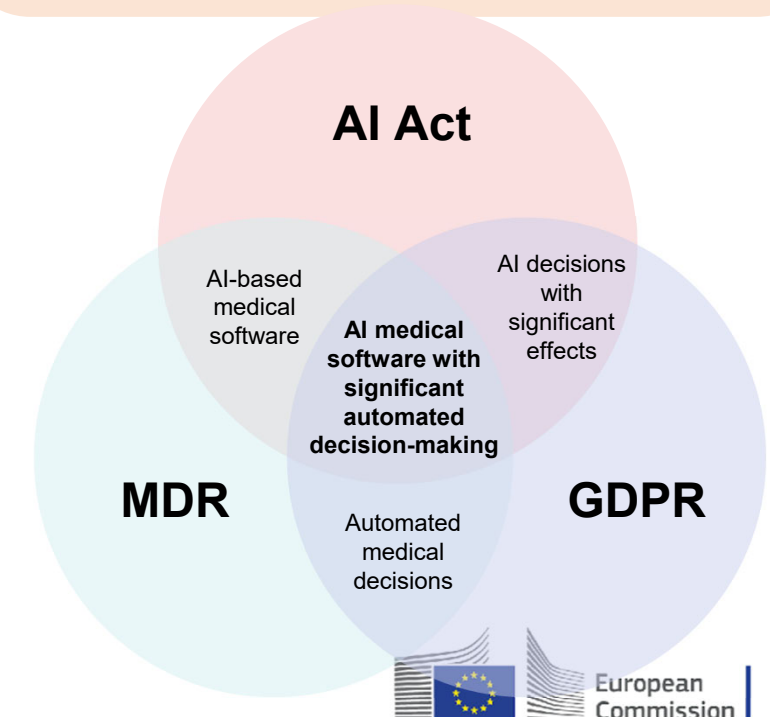

EUCAIM Will transform the creation of medical devices in Europe

What does EUCAIM provide to accelerate the innovation process?

- High-availability, cyber-secure technical infrastructure with technical and organizational information security measures.
- Datasets with data interoperability standards.
- Integration with multi-modal clinical data: EHR, pathology and molecular biology, among others.
- Audit trail mechanism aligned with EU HTA Regulation.
- **For model training:** Allowing data download with license agreements. The manufacturing process requires the availability of data from the manufacturer to train AI models in auditable and traceable infrastructures (AI act).
- **For model validation:** Integration of AI modules in docker containers on the platform, complying with EUCAIM requirements for validation.

Contracts and key documents

- Incorporation agreement and internal bylaws
- Data Exchange contracts
- Data processing assignment agreements
- Platform Terms and Conditions of Use
- Data Access and use policy
- License agreements
- Agreements with critical suppliers

European Cancer Imaging Initiative – business model

11 Member States contributing to the EUCAIM EDIC pre-notification as active members of the EDIC Working Group (every 2 months).

Secure access to

high-quality genomics

& corresponding clinical data

across Europe

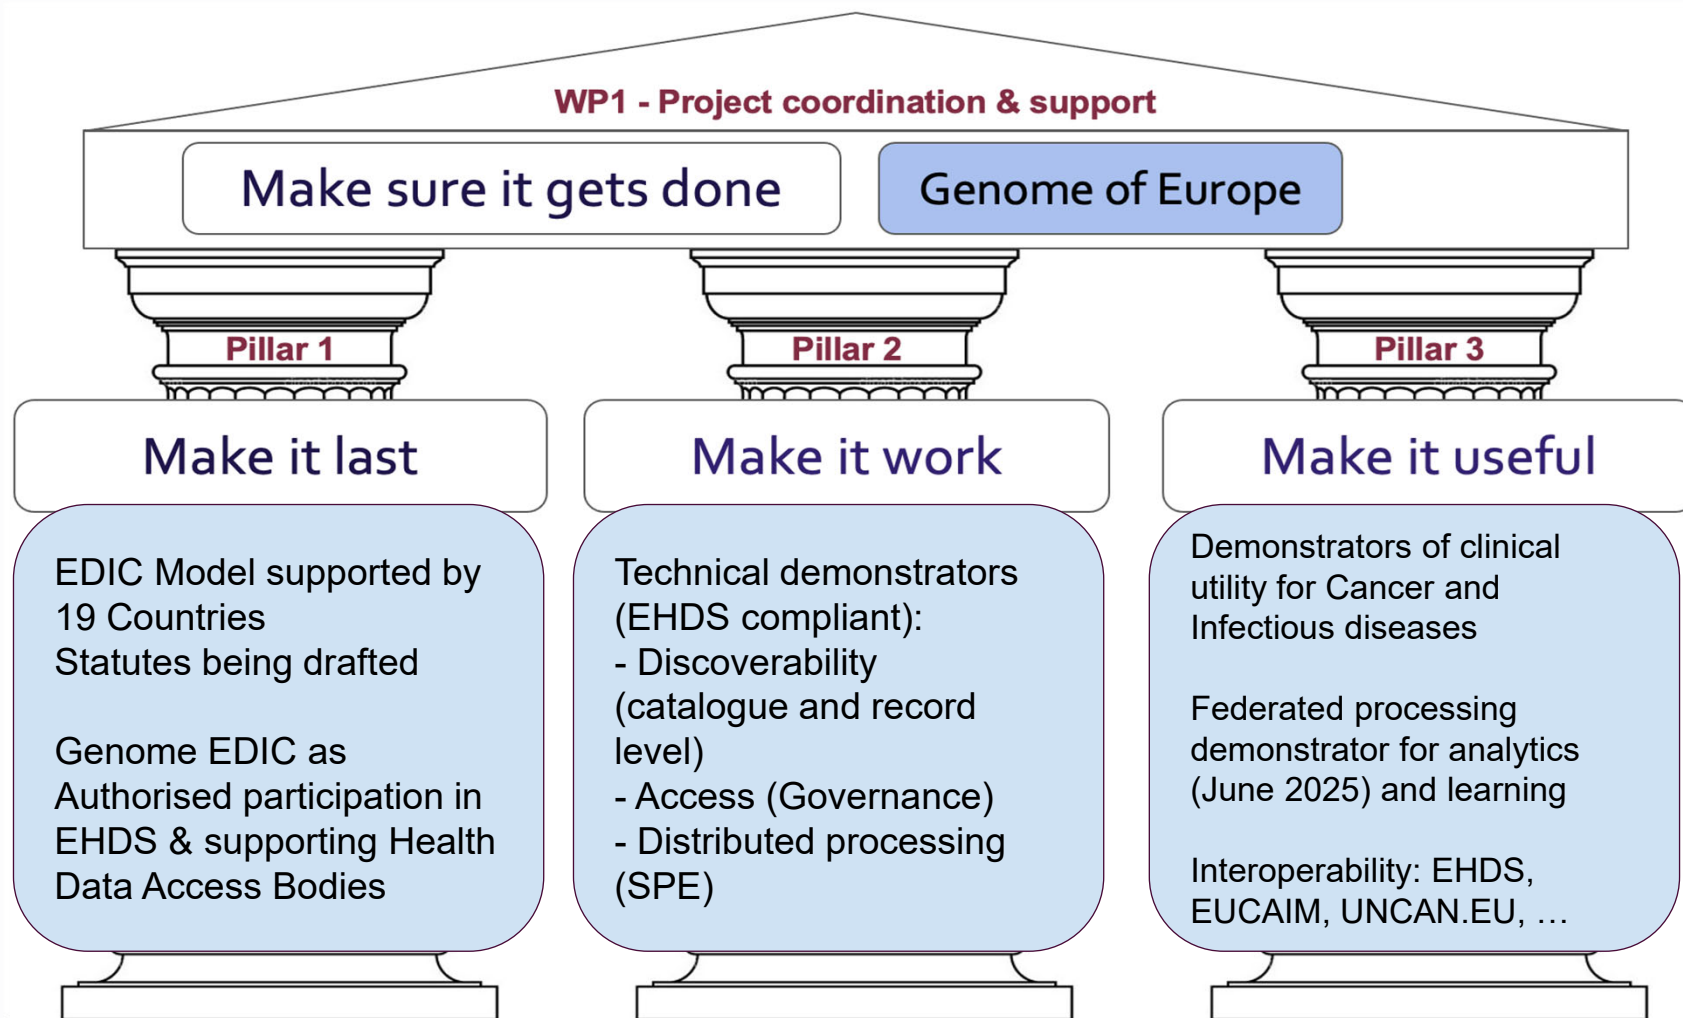

for **better research, innovation,
personalised healthcare and health
policy making**

GDI Project: building the 1+MG data infrastructure

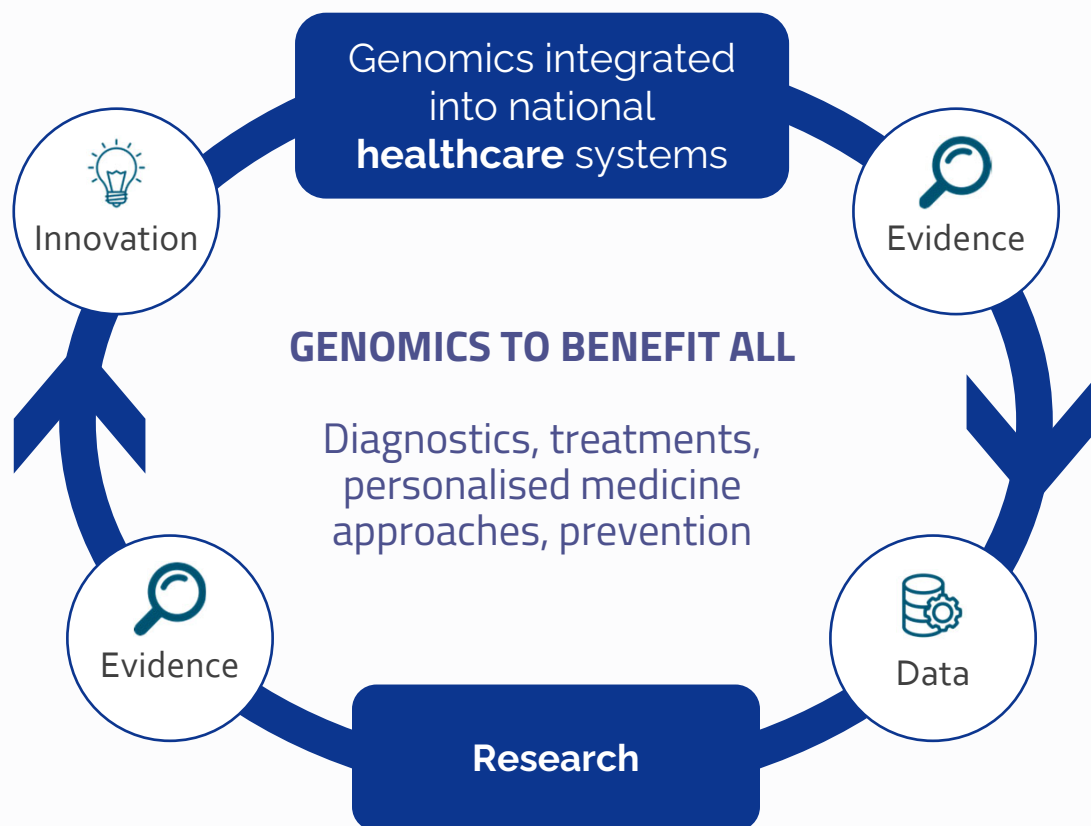

Latest technical and clinical utility video demonstrators:

<https://gdi.onemilliongenome.eu/news/gdi-technical-infrastructure>

Value proposition

By **unlocking access to high-quality clinical genomics and health data** for secondary use

(High quality genomic and clinical data \Rightarrow Research \Rightarrow Knowledge \Rightarrow Healthcare Innovation)

we will accelerate the deployment of personalised medicine that will significantly **improve prevention, diagnosis and treatment to benefit everyone** in combination with other source of data (e.g. socioeconomic data)

ELIXIR Bioinformatics Industry Forum (EBIF) - June 2025 - London

Topic: Federated life science data analysis : Overcoming challenges for global impact

We bring together bioinformaticians and technical specialists to explore solutions to major challenges in the data-driven life science sector.

- Free and open event
- Approximately 80 attendees
- A full day event with
 - short presentations
 - roundtable discussions
 - networking opportunities

Open for everyone to contribute:

If you are interested in presenting or leading a roundtable discussion email despoina.sousoni@elixir-europe.org.

VELES Project Overview

HORIZON-WIDERA-2022-ACCESS-04 Call: Excellence Hubs

Start Date: 1st June 2023

Duration: 4 years

Consortium: 15 Partners from 7 from EU countries, Coordinator: GATE

VELES accelerates the smart health innovation excellence in Bulgaria, Greece, Romania and Cyprus.

VELES creates a sustainable place-based innovation ecosystem, enabled by Regional Smart Health Data Space, including a novel transformational framework, R&I and investment strategy and action plan for development and adoption of innovative and secure digital solutions to underpin the delivery of sustainable healthcare services.

VELES Project: Driving the Future of Smart Health Data Spaces

- Developing a Regional Smart Health Data Space (RSHDS) Framework
 - Enhancing health data sharing at national & regional levels.
 - Improving clinical practices, patient privacy, and secure digital health services.
- Demonstrated Through 4 Key Pilots
 - Alzheimer's (Bulgaria) | Cerebral Tumors (Romania) | Cancer Treatment (Greece) | Dementia Care (Cyprus)
 - Showcasing AI-driven healthcare efficiency & decision-making improvements.
- Supporting Cross-Border Healthcare & Personalized Treatments
 - Secure data exchange for better patient outcomes.
 - Ethical, legal, governance, and business best practices.
- Aligned with the European Health Data Space (EHDS)
 - Strengthening EU-wide health data integration & collaboration.
- Advancing AI-Driven Healthcare
 - AI-powered diagnostics, treatment, and patient care improvements.
- Scaling & Expanding
 - Increasing RSHDS adoption & integrating with EU health initiatives (Horizon Europe).

Advancing Health Data Sharing with IDS-RAM v.5 & Dataspace protocol

Key Benefits & Features

Trust-Based Data Sharing

- Standardized framework enabling secure & controlled data exchange.
- Decentralized environments where hospitals, AI developers, pharma, and researchers retain data control.

Regulatory Compliance & Governance

- GDPR, HIPAA & ethical AI compliance ensured.
- Smart contracts & policies define data usage, access, and monetization.

Seamless Interoperability

- FHIR & HL7 standards enable cross-system data exchange.
- Connects EHRs, IoT devices, AI models, & research databases.

Zero-Trust Security & Encryption

- Decentralized Identity (DID) & Verifiable Credentials (VC) for authentication.
- Confidential Computing & Homomorphic Encryption for secure processing.

AI-Driven Data Utilization

- **Federated Learning** allows AI model training without moving raw patient data.
- **Edge AI & On-Premise Processing** enhance data security.

Transforming Healthcare with Secure & Decentralized Data Spaces

By integrating IDS RAM v.5 and Dataspace protocol, the healthcare industry ensures **trustworthy, decentralized, and privacy-preserving** health data ecosystems - driving AI-powered medical innovations and secure global collaborations while maintaining **data sovereignty & compliance**.

Status of the Project

1

Implementation Phase:

- Developing a Regional Smart Health Data Space (RSHDS) Framework for Southeast Europe

2

Pilot Studies:

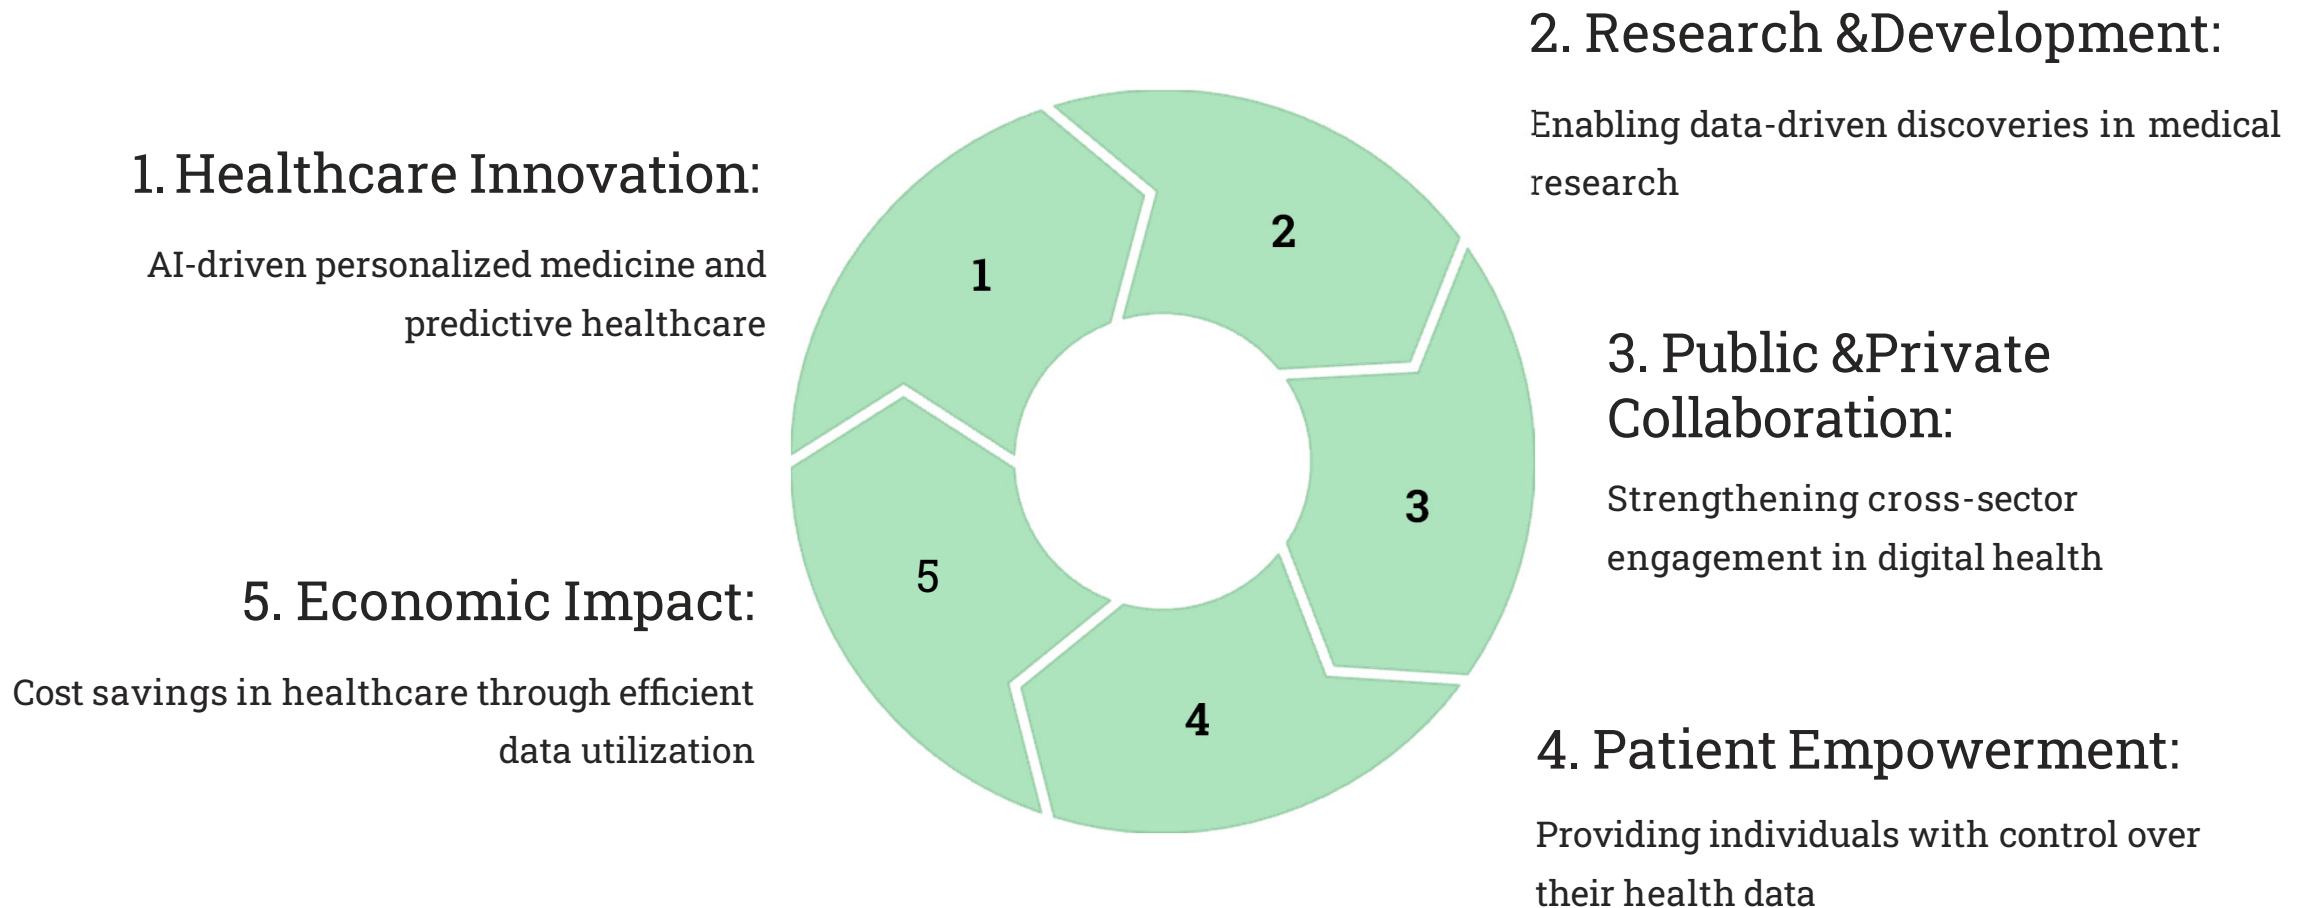

- Cancer Treatment (Greece): Data- driven approaches for therapy optimization
- Dementia Treatment (Cyprus): AI- assisted pain assessment tools
- Two additional pilots in Southeast Europe focusing on clinical decision-making

3

Partnerships:

- Collaboration with hospitals, research institutions, and EU stakeholders

Data Spaces Symposium

Enjoy your lunch!

These are the sessions you can choose from at 13:30:

Track 1:

Focus session on
telcos & ICT providers

Key role of telcos and
ICT providers:
Enabling data spaces
and providing
infrastructures

Track 2:

Domain session on
smart cities and
communities

Societal impact of data
spaces: addressing
local challenges,
delivering better
services to citizens

Track 3:

Data space tech
session

Capabilities you
need to make a data
space a success
